Bootear con Ventoy (Ejecutar)

La presente receta tiene como objetivo mostrar cómo correr el ejecutable para Ventoy en cualquier dispositivo de almacenamiento.

- 1.- Ingrese el dispositivo de almacenamiento al computador.
- 2.- En el navegador de su preferencia ingrese a la página oficial de Ventoy (<https://www.ventoy.net/en/index.html>).

3.- Ingrese a la sección de descargas “Downloads”.

The screenshot shows the Ventoy website. The navigation bar at the top has a red box around the 'Downloads' link. Below the navigation bar, there is a 'News' section with a date '2025/02/24' and a link to 'New release ventoy-1.1.05'. A 'What is Ventoy' section follows, explaining that Ventoy is an open-source tool to create bootable USB drives. It lists supported file formats (ISO, WIM, IMG, VHD, etc.) and operating systems (Windows, Linux, ChromeOS, etc.). A 'DONATE' button with a hand icon is visible on the right. Below this is the 'iVentoy' section, which promotes a new project for network booting. The 'Experience Sharing' section encourages users to share their experiences. The 'Ventoy Browser' section mentions that users can browse ISO files locally. Finally, the 'Features' section is partially visible.

What is Ventoy

Ventoy is an open source tool to create bootable USB drive for ISO/WIM/IMG/VHD(x)/EFI files.
With ventoy, you don't need to format the disk over and over, you just need to copy the ISO/WIM/IMG/VHD(x)/EFI files to the USB drive and boot them directly.
You can copy many files at a time and ventoy will give you a boot menu to select them ([screenshot](#)).
You can also browse ISO/WIM/IMG/VHD(x)/EFI files in local disks and boot them.
x86 Legacy BIOS, IA32 UEFI, x86_64 UEFI, ARM64 UEFI and MIPS64EL UEFI are supported in the same way.
Most types of OS supported (Windows/WinPE/Linux/ChromeOS/Unix/VMware/Xen...)
1200+ image files are tested ([list](#)), **90%+** distros in [distrowatch.com](#) supported ([details](#)).
